Introduction

Purpose

Crypto Fund Quarterly Report Q1 2022

Crypto Fund Research's quarterly crypto fund reports provide a snapshot of the industry at quarter's end, as well as a detailed look at industry trends across time. We hope the quantitative data and related insights provided by these reports play a positive role in continuing to improve the crypto fund industry's transparency and provide useful metrics for crypto funds and other participants to benchmark their growth, operations, and best-practices.

In the interest of providing the broadest possible coverage, the report covers crypto hedge funds, venture funds, hybrid funds, private equity funds, fund of funds, and passive funds. Where not otherwise noted, the term "crypto fund" is used in a manner inclusive of this wide variety of fund types.

Market Overview

As of the end of Q1, 2022 there were more than 850 crypto funds across the globe with primary offices in more than 80 countries. The pace of new fund launches began to accelerate in the first quarter of 2021, and this trend continued during the rest of 2021 and into 2022. However, for the first time in almost two years, the number of crypto funds closing their doors exceeded the number of new launches in Q1.

Crypto funds lost 3.4% in Q1 - slightly underperforming Bitcoin's -1.7% return .

In the News

The Bad

- Net of fees, crypto funds slightly underperformed Bitcoin in Q1.

The Good

- Former a16z partner Katie Haun raised \$1.5 billion for her two new crypto funds.
- Sequoia Capital announced the launch of its \$600 million crypto token fund.
- Bain Capital launched a \$560 million crypto fund focused on Web3 and DeFi

Crypto Fund Industry Overview

For the first time since Q2, 2020, the number of new crypto fund closures exceeded the number of new launches.

Crypto Fund Launches vs. Closures

Q4 '19 - Q1 '22

Crypto Fund Industry Overview

Just over half of all crypto funds are based in North America - most in the US. Europe and Asia are each home to around 20% of funds.

However, it's important to note that crypto funds tend to be more likely to have "distributed" workforces than traditional funds.

A 2021 [survey of crypto funds](#) by Crypto Fund Research found that rather than maintaining one or more physical offices, 27% of funds do not rely on a physical office and instead have employees working from home or other locations around the world.

While the majority of crypto funds have a primary office location in the US, less than 20% are technically domiciled there (as a Delaware company, for example). For a variety of tax, legal, and regulatory reasons, the Cayman Islands and the British Virgin Islands are the predominant offshore legal domiciles for crypto funds. Together these offshore locales are the domicile for 49% of crypto funds. This is relatively consistent with studies of traditional hedge funds that have found about one third are domiciled offshore with only 20% domiciled in the US.

Crypto Funds by Continent
Primary Office Q1 '22

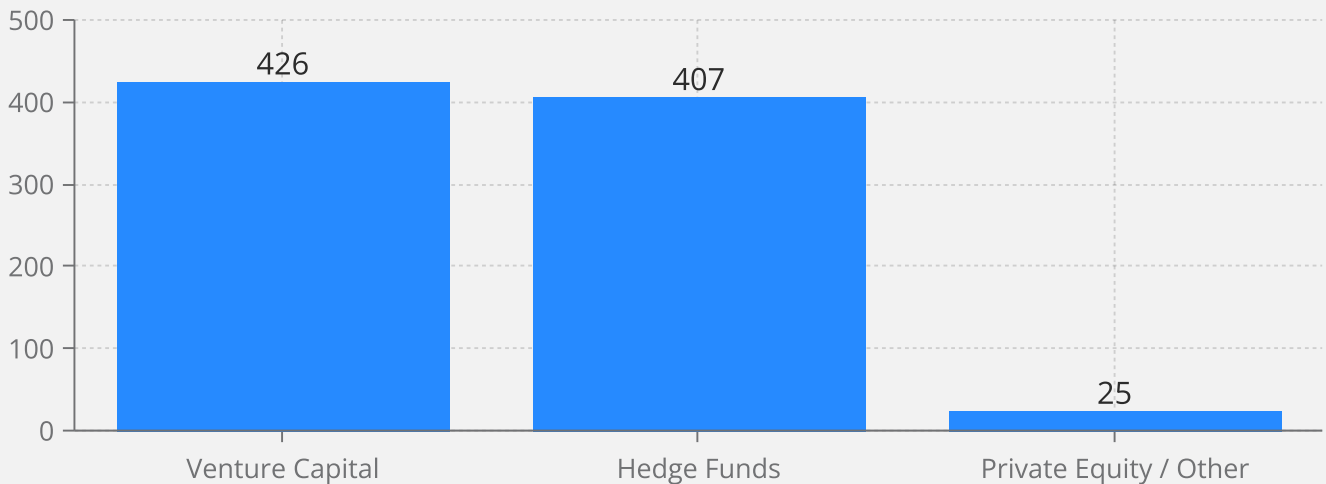

Crypto Funds by Legal Domicile
Q1 '22

Crypto Fund Industry Overview

The majority of crypto funds can be broadly categorized as venture funds, followed closely by crypto hedge funds.

Crypto Funds by Type
Q1 '22

Crypto fund assets under management (AUM) climbed were essentially unchanged in the first quarter of 2022. Very modest investor inflows helped to counter small performance declines across many funds.

Cumulative Crypto Funds' AUM
Q4 '18 - Q4 '22 (Millions USD)

Crypto Fund Industry Overview

Crypto fund flows are an important indicator of investor sentiment. They are the net of new investor subscriptions and redemptions and are independent of changes in the performance of funds' underlying assets.

Crypto Fund Net Flows

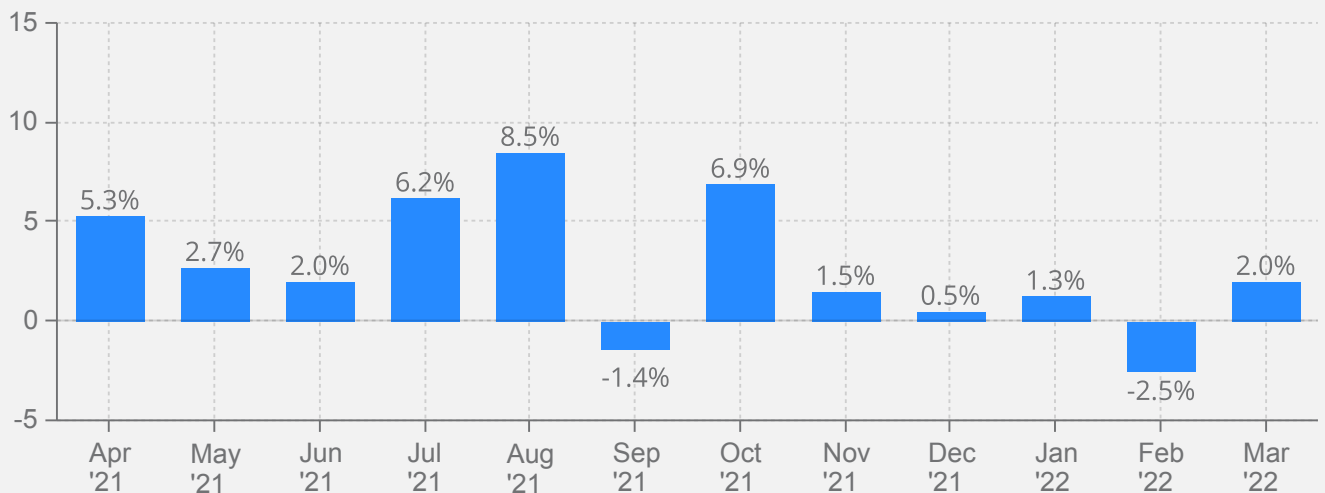

Monthly absolute net in/outflows for crypto hedge funds (\$millions USD)

Crypto funds saw modest inflows of around \$200 million in Q1. Investor inflows into crypto hedge funds in January and February were positive.

Crypto Fund Net Percentage Flows

Monthly crypto hedge fund net in/outflows as a percentage of assets reported in the prior period

Crypto Fund Industry Overview

Though crypto fund AUM has continued to grow, assets remain highly concentrated in the hands of a couple dozen funds. However the recent trend has been one of growing size of crypto funds. This is primarily due to strong performance as well as attrition by some smaller funds. Additionally, several new funds have launched with committed capital in excess of \$100 million.

**Crypto Fund Asset Size
By Fund AUM Q1 2022**

\$69.24 Billion

Crypto Fund Research estimates that as of the end of Q1 2021, crypto funds collectively managed approximately \$69.2 billion in assets. This includes crypto hedge funds, venture funds, and index funds and represents a slight decline from the end of 2021.

35.8%

While most crypto funds remain relatively small, the proportion managing \$10 million or less continues to shrink as funds continue to attract new funds and grow their AUM through positive fund performance. 37% of crypto funds manage \$10 million or less. The proportion of funds managing more than \$100 million continues to grow.

Crypto Fund Industry Overview

Due to the variation in size and vintage between crypto funds, it can be useful to look at median figures for some key operational metrics as shown below:

Median Fund AUM

Crypto fund assets are quite top-heavy and highly concentrated in the hands of a couple dozen funds. In fact, a quarter of all assets are managed by the 5 largest crypto funds. 36% of crypto funds manage USD 10 million or less in crypto assets.

Median Number of Employees

Though some crypto funds have a dozen or more employees, most funds are relatively small. The median number of full-time employees in non-advisory roles is eight.

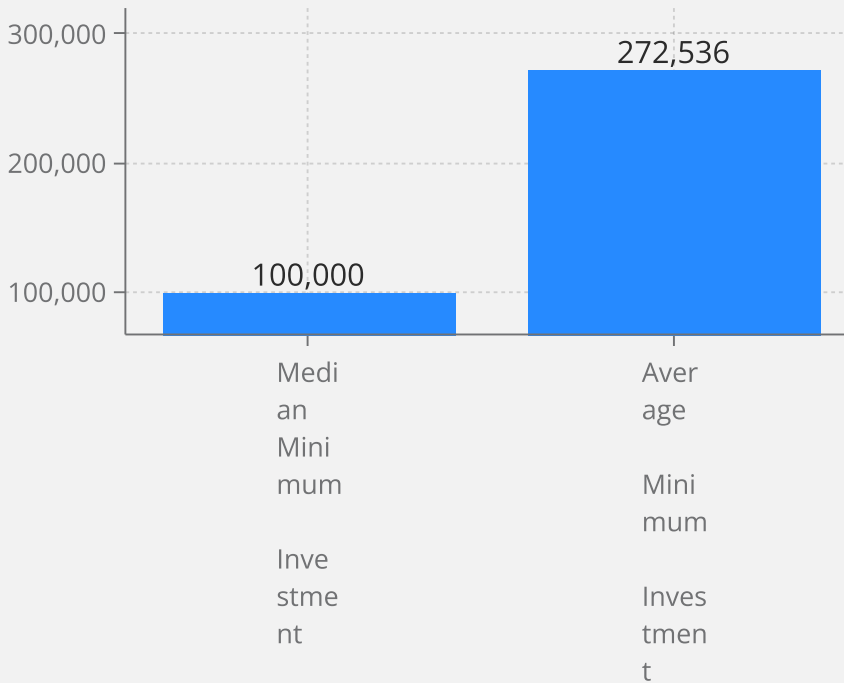

Median Number of Investments

Among crypto/blockchain-only venture funds, the median number of investments made since inception is 26. Most of these investments are early-stage investments and older vintage funds tend to have made a greater number of total investments.

Crypto Fund Industry Overview

Crypto Fund Minimum Investments
All Fund Types

24%

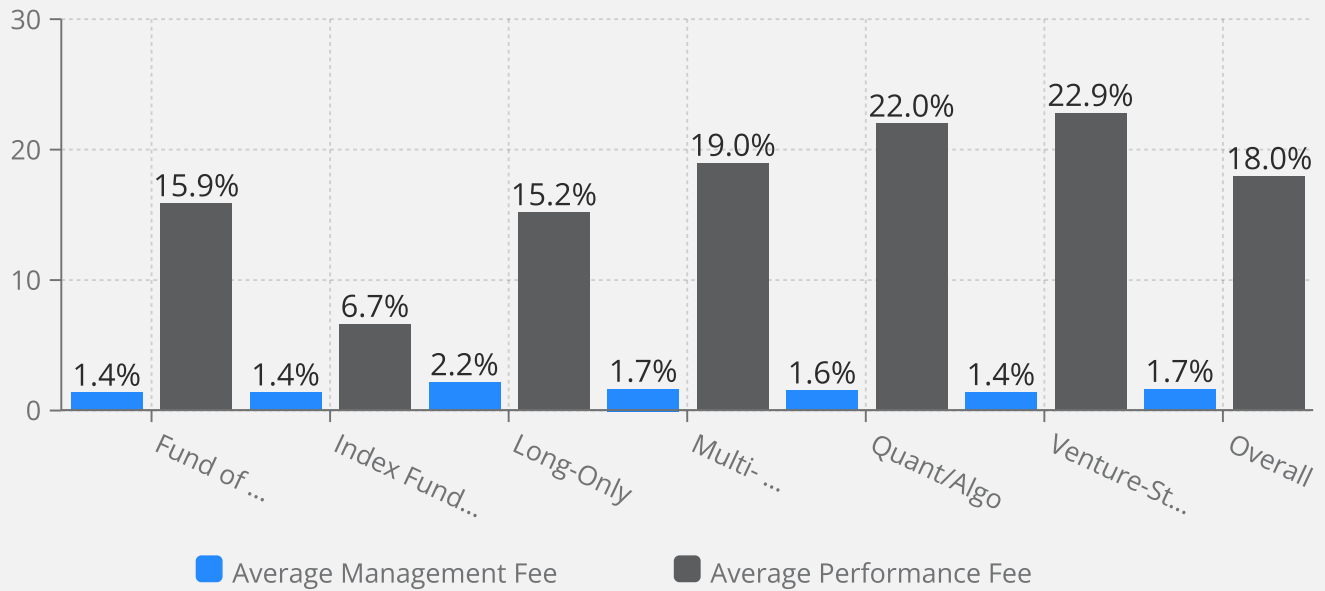

24% of crypto hedge funds have a minimum investment of \$500,000 USD or more

Minimum investments in crypto funds vary significantly across fund types. Crypto hedge funds and fund of funds typically have the highest minimum investment, while tokenized funds have low or non-existent minimums.

Type	Median Min. Investment	Average Min. Investment
Fund of Funds	\$100,000	\$175,000
Hedge Fund	\$100,000	\$282,500
Index Fund	\$50,000	\$252,500
Investment Trust	\$37,500	\$37,500
Managed Account Platform	\$6,250	\$6,250
Mutual Fund Trust	\$1,000	\$1,000
Tokenized Fund	\$0	\$5,000
TOTAL	\$100,000	\$272,536

Crypto Fund Industry Overview

Crypto Fund Average Fees
By Fund Category Q1 '22

A 2% management fee and 20% incentive/performance fee (2/20) is the most common fee structure among crypto funds. However, the average fees across all funds tend to be lower and vary slightly between fund types. Index and other passive strategies often don't charge a performance fee, while funds with more active investment strategies tend to have higher performance fees (and sometimes lower management fees).

Fund Type	Average Perf. Fee	Average Mgmt. Fee
Fund of Funds	15.93%	1.39%
Index Fund / Tracker	6.67%	1.41%
Long-Only	15.68%	2.07%
Multi-Strategy/Other	19.03%	1.69%
Quantitative/Algorithmic	21.88%	1.50%
Venture-Style/ICOs	22.86%	1.43%
TOTAL	18.21%	1.65%

Crypto Fund Performance Data and Metrics

The CFR Crypto Fund Index, which measures the mean return, net of fees, of around 150 actively managed crypto funds, returned -3.4% for Q1, 2022.

CFR Crypto Fund Index vs. Bitcoin
Q1 2022

-3.4%

The CFR Crypto Fund Index lost 3.4% in Q1, 2022. Crypto funds slightly underperformed Bitcoin in the quarter, though both measures were down.

31.0%

Less than one third of crypto funds outperformed Bitcoin in Q1, 2022. Only 24% of crypto funds had positive returns for the quarter.

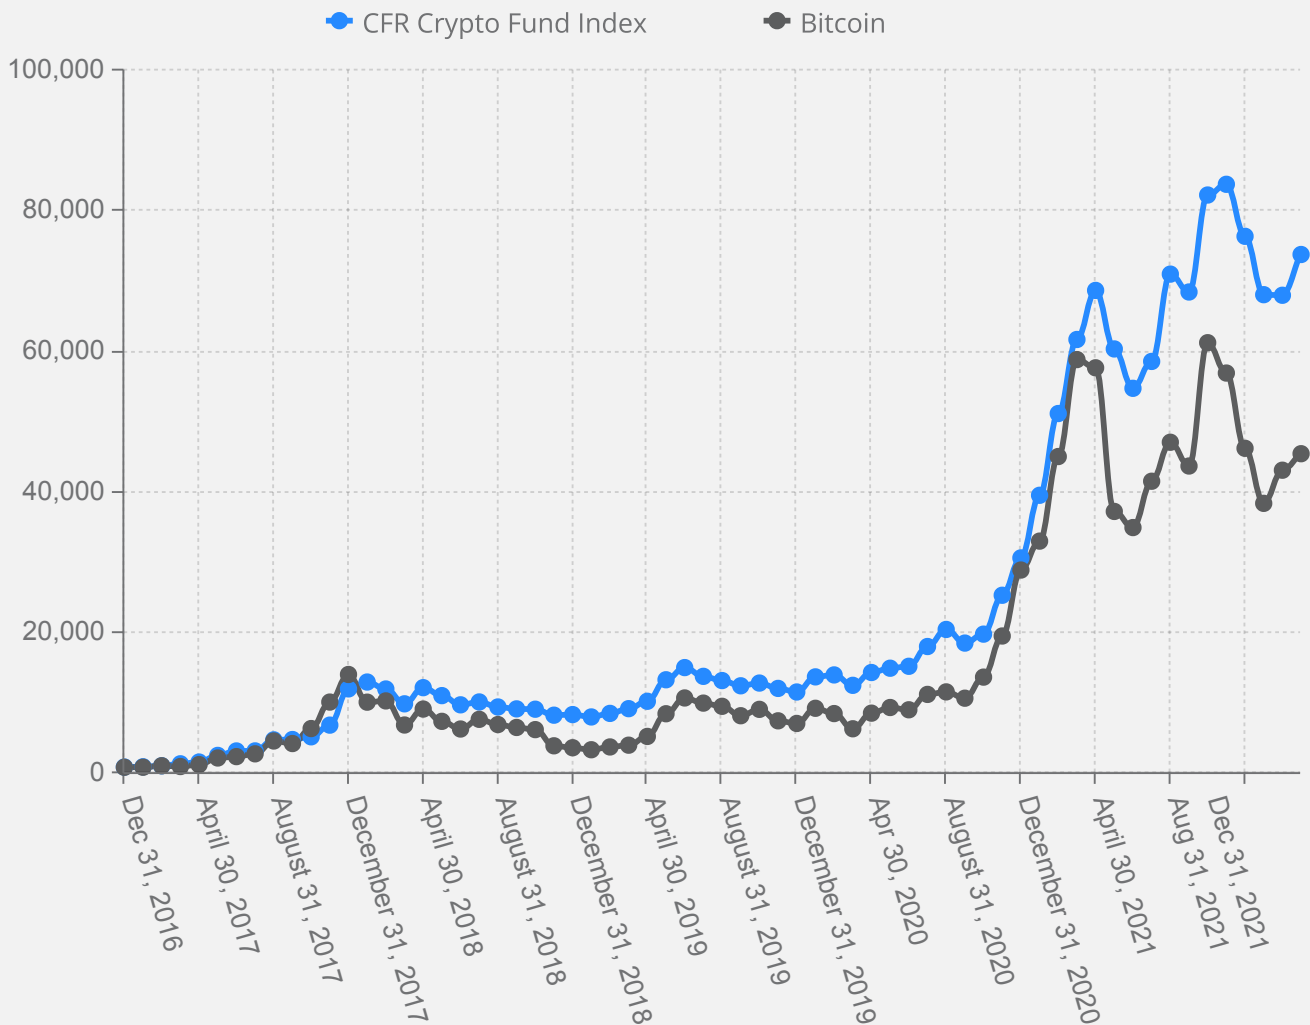

For the latest results from the CFR Crypto Fund Index please visit:
<https://cryptofundresearch.com/cfr-crypto-fund-index/>

Crypto Fund Performance Data and Metrics

Between inception in January of 2017 and the end of Q1 2022, the CFR Crypto Fund Index, has returned 7,286%. Bitcoin is up 4,453% during this same period. Much of the index's historical outperformance has occurred during bearish market conditions like those in Q2, 2021. Bitcoin did, however, outperform crypto funds in Q1

CFR Crypto Fund Index vs. Bitcoin

December 31, 2016 - March 31, 2022

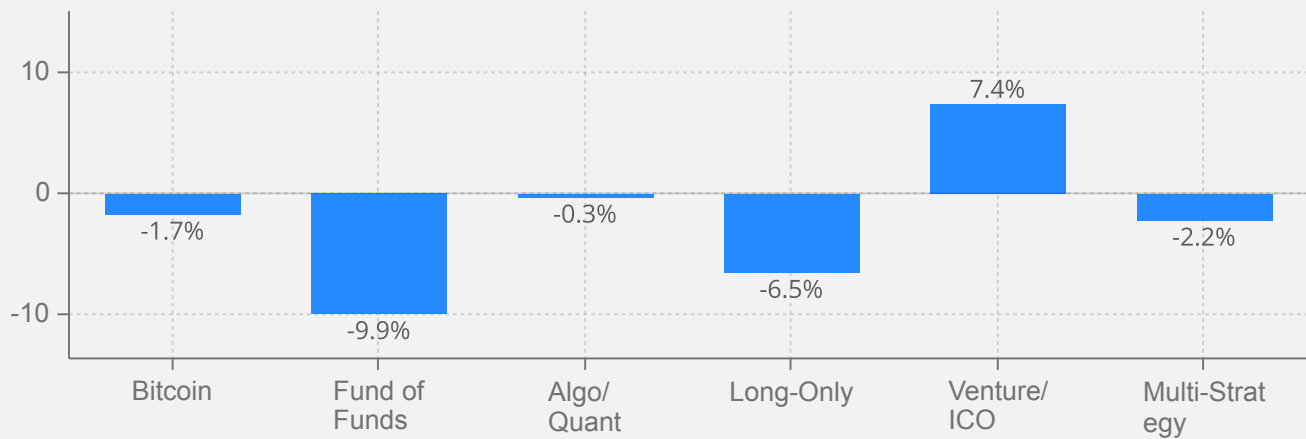

For more information on the CFR Crypto Fund Index, including methodology, monthly returns, and other performance metrics, please visit <https://cryptofundresearch.com/cfr-crypto-fund-index/>

Crypto Fund Performance Data and Metrics

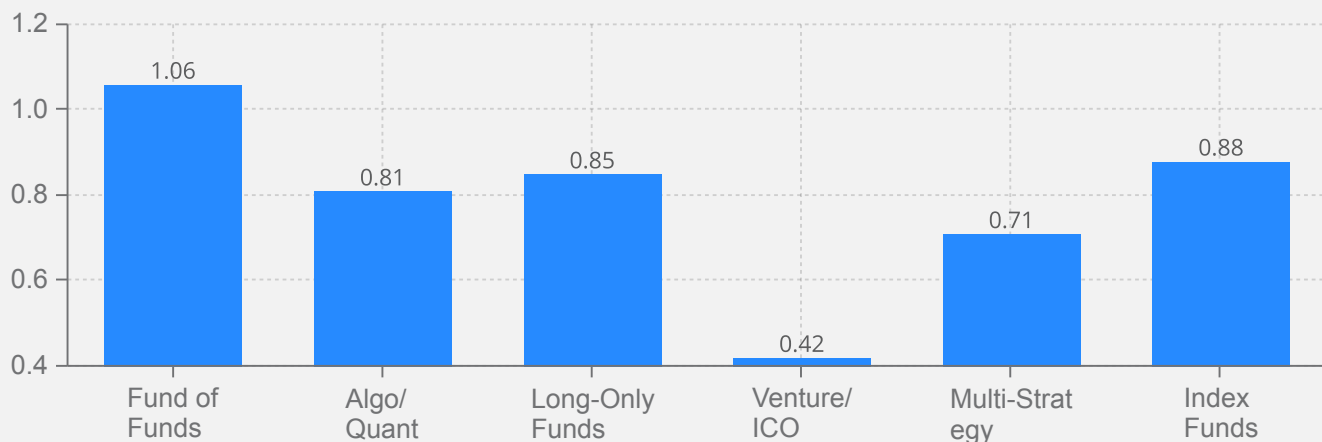

Crypto funds lost 3.4% in Q1, 2022. With the exception of venture-style funds, all fund strategies were negative for the quarter. Multi-strategy funds were the top performing strategy in Q4.

**Q1 2022 Crypto Fund Performance
By Fund Strategy**

Beta is used in traditional finance to measure market based risk and, by using Bitcoin as a proxy for market returns, allows us to determine how much of a given fund strategy's returns could be simply due to market exposure to Bitcoin. Fund of funds tend to have the highest beta, while venture-style funds tend to have the lowest.

**Beta / Relationship to Bitcoin
Q1 '17 - Q4 '22 by Fund Strategy**

Crypto Fund Performance Data and Metrics

"Skew" captures the shape of the distribution of returns and can be defined as the extent to which returns vary from a normal distribution. Most crypto fund strategies demonstrate a positive skew, or a longer or fatter tail on the right. It's important to keep in mind that the accuracy of skew calculations depend on large quantities of return data, which are not necessarily available for most crypto funds.

Median Skew Across Fund Style

Q1 '17 - Q1 '22 by Fund Strategy

Like skew, kurtosis is a measure of returns relative to a normal distribution. Kurtosis measures the size of extreme returns compared to a normal distribution of returns with a positive kurtosis captures the size of these extreme returns. The kurtosis of a normal distribution is 3.

Median Kurtosis Across Fund Style

Q1 '17 - Q1 '22 by Fund Strategy

Crypto Fund Performance Data and Metrics

The Sharpe Ratio is a performance metric often used by investors to help them better understand the relationship between risk and returns of an investment. When comparing like investments, a higher Sharpe Ratio may indicate a better return relative to the amount of risk taken. Sharpe Ratio's can use either arithmetic or geometric returns. We use geometric returns in our calculation below.

Median Sharpe Ratio Across Fund Style
Q1 '17 - Q1 '22 by Fund Strategy

Like the Sharpe Ratio, the Sortino Ratio helps investors understand the relationship between risk and returns of an investment. However, the Sortino Ratio focuses solely on the risk (standard deviation) or negative returns. By using only negative returns, the Sortino Ratio can help investors identify bad/downside risk, while ignoring good/upside risk.

Median Sortino Ratio Across Fund Style
Q1 '17 - Q1 '22 by Fund Strategy

Crypto Fund Performance Data and Metrics

Q1 '22 Crypto Fund Research Performance Awards

Crypto Fund Research tracks the performance of more than 200 crypto funds - primarily crypto hedge funds, fund of funds, and hybrid funds. At the end of each quarter and year, we announce awards for the top performing funds in each period, net of fees.

Below are the Crypto Fund Research Performance Award winners for Q1, 2022:

Top Performing Crypto Funds Overall, Q1 2021

Top Performing Crypto Funds by Strategy, Q1 2022

Crypto Fund Survey

A recent survey of over 60 crypto funds was conducted to gauge investor sentiment and provide further insight into the crypto industry. The survey covers crypto venture funds, hedge funds, hybrid funds, index funds, and fund of funds and was conducted between July 12 and August 23, 2022. Full survey results here: <https://cryptofundresearch.com/2021-crypto-fund-survey/>

Do You Anticipate Your Fund Will Increase AUM in 2021?

All Fund Types

Crypto Fund assets under management (AUM) have continually grown since 2018 and recently approached \$60 billion. It may therefore come as no surprise that most crypto funds anticipate growing AUM in 2021. However, unlike in our 2020 survey where almost 10% of funds were unsure or did not expect to grow AUM, 100% of funds surveyed expected to grow AUM in 2021.

78% of crypto funds think its likely or very likely that Bitcoin will surpass its all-time-high price of approximately \$64,000 USD in the next 12 months (this is more than double the average price at the time of the survey). Crypto funds are significantly more bullish than in 2020 when about 60% thought Bitcoin would more than double over the following 12 months.

Will Bitcoin Reach ATH of \$64,000 by June 30, 2022?

All Fund Types

Crypto Fund Survey (cont.)

The majority of crypto hedge funds and hybrid funds use some sort of derivative product either for risk management, leveraged exposure, or other purpose. A little over three quarters of both crypto hedge funds and hybrid funds use derivatives, with hedge funds more likely to use futures and hybrid funds more likely to use options or other derivatives. Venture funds are least likely to use derivatives.

Nearly two thirds of crypto funds use at least one derivative product with futures and options being the most common.

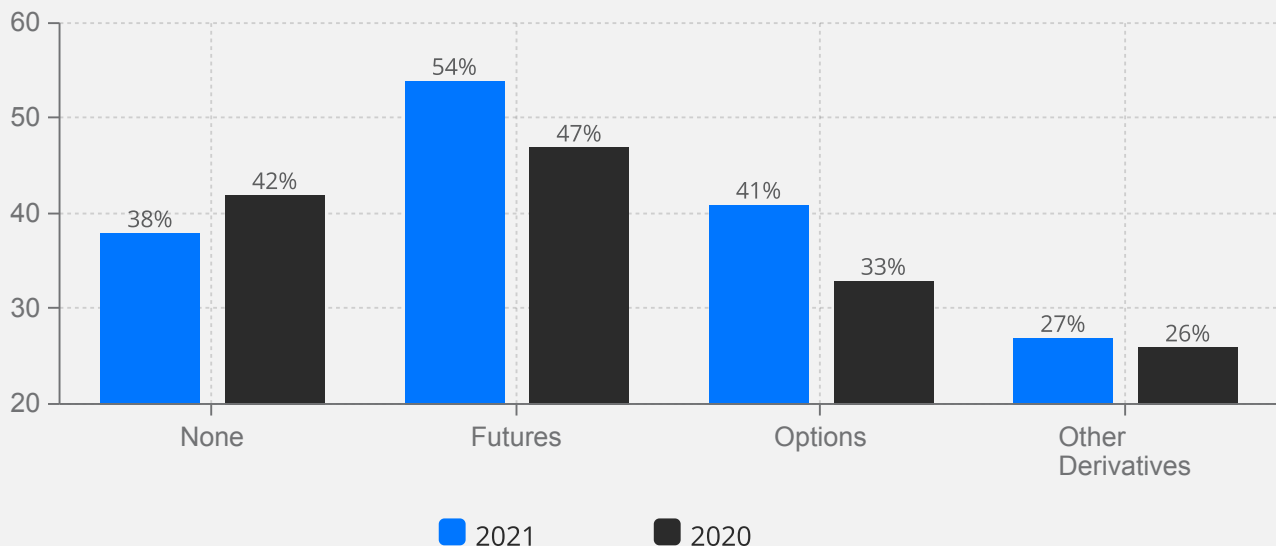

Does Your Fund Utilize Derivative Products?

By Fund Type

Crypto Fund Derivative Use

2021 vs. 2020

Crypto Fund Survey (cont.)

Derivatives play a vital role in investment strategies, according to most respondents. The survey results reveal that roughly 88% of crypto funds agree that derivatives and structured products are healthy components of the crypto industry. Only 2% of crypto funds disagree on the benefits of these securities in the crypto industry, citing counterparty risk and the misuse of these products as the primary rationales against their usage.

Derivatives are Healthy Part of the Crypto Investment Space

All Fund Types

Fund of funds are least likely to believe derivatives are healthy for the crypto investment space. This may be due to fund of funds rarely using such products (even if the funds they invest in often do)

Crypto Funds View Derivatives as Healthy for Space

By Fund Type

Crypto Fund Survey (cont.)

Derivatives play a vital role in investment strategies, according to most respondents. The survey results reveal that roughly 85% of crypto funds agree that derivatives and structured products are healthy components of the crypto industry. Only about 5% of crypto funds disagree on the benefits of these securities in the crypto industry, citing counterparty risk and the misuse of these products as the primary rationales against their usage.

Derivatives are Healthy Part of the Crypto Investment Space

All Fund Types

The risk management benefit of derivative and other structured products was the most cited rationale for why these instruments are beneficial for the crypto industry. Approximately 92% of funds cited risk management options, regardless of fund category and size. Volatility price discovery, and its benefit to market structure, is the second most cited reason. Only about 32% of crypto funds highlighted the additional leverage options that these instruments provide as a rationale for using derivatives and structured products.

Why are Derivatives a Healthy Part of the Crypto Investment Space?

Top Responses, All Fund Types

Crypto Fund Survey (cont.)

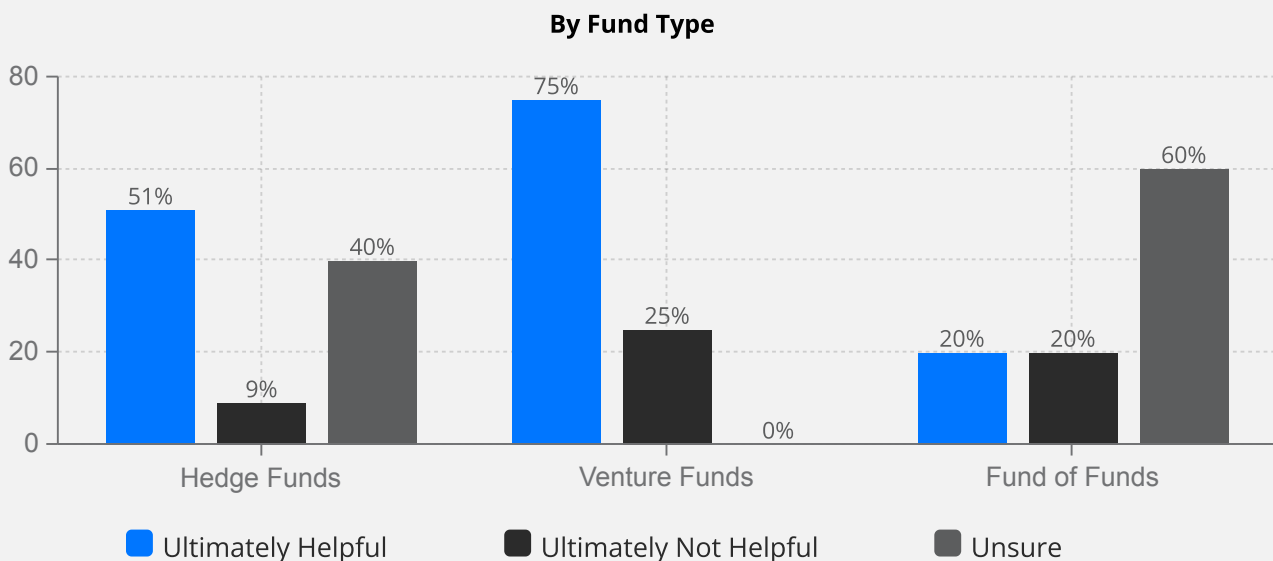

We asked respondents whether China's ban on cryptocurrency mining would be helpful or harmful to the long term success of cryptocurrencies like Bitcoin. The overwhelming majority of crypto funds believe the mining ban will ultimately be helpful.

Crypto Fund Views on Impact of China's Mining Ban on Long-Term Success of Bitcoin

While many funds remain agnostic or unsure of the long-term effects of China's ban on cryptocurrency mining, the overwhelming majority of funds expressing an opinion believe the ban will ultimately be helpful to the long-term success of Bitcoin. Venture funds were most likely to think the ban would be helpful, but also most likely to see it as unhelpful.

Crypto Fund Views on Impact of China's Mining Ban on Long-Term Success of Bitcoin

Crypto Fund Survey (cont.)

The results concerning institutional interest in cryptocurrencies are largely consistent across crypto fund types - nearly all crypto funds agree that institutional interest in crypto investments increased in the first half of 2021.

Institutional Interest in Crypto Investments Has Increased in H1 2021

All Fund Types

Compared with the same question last year, crypto funds were significantly more likely to report an increase in institutional interest in 2021.

Crypto Funds Believe Institutional Interest in Crypto Increased in First Half of Year

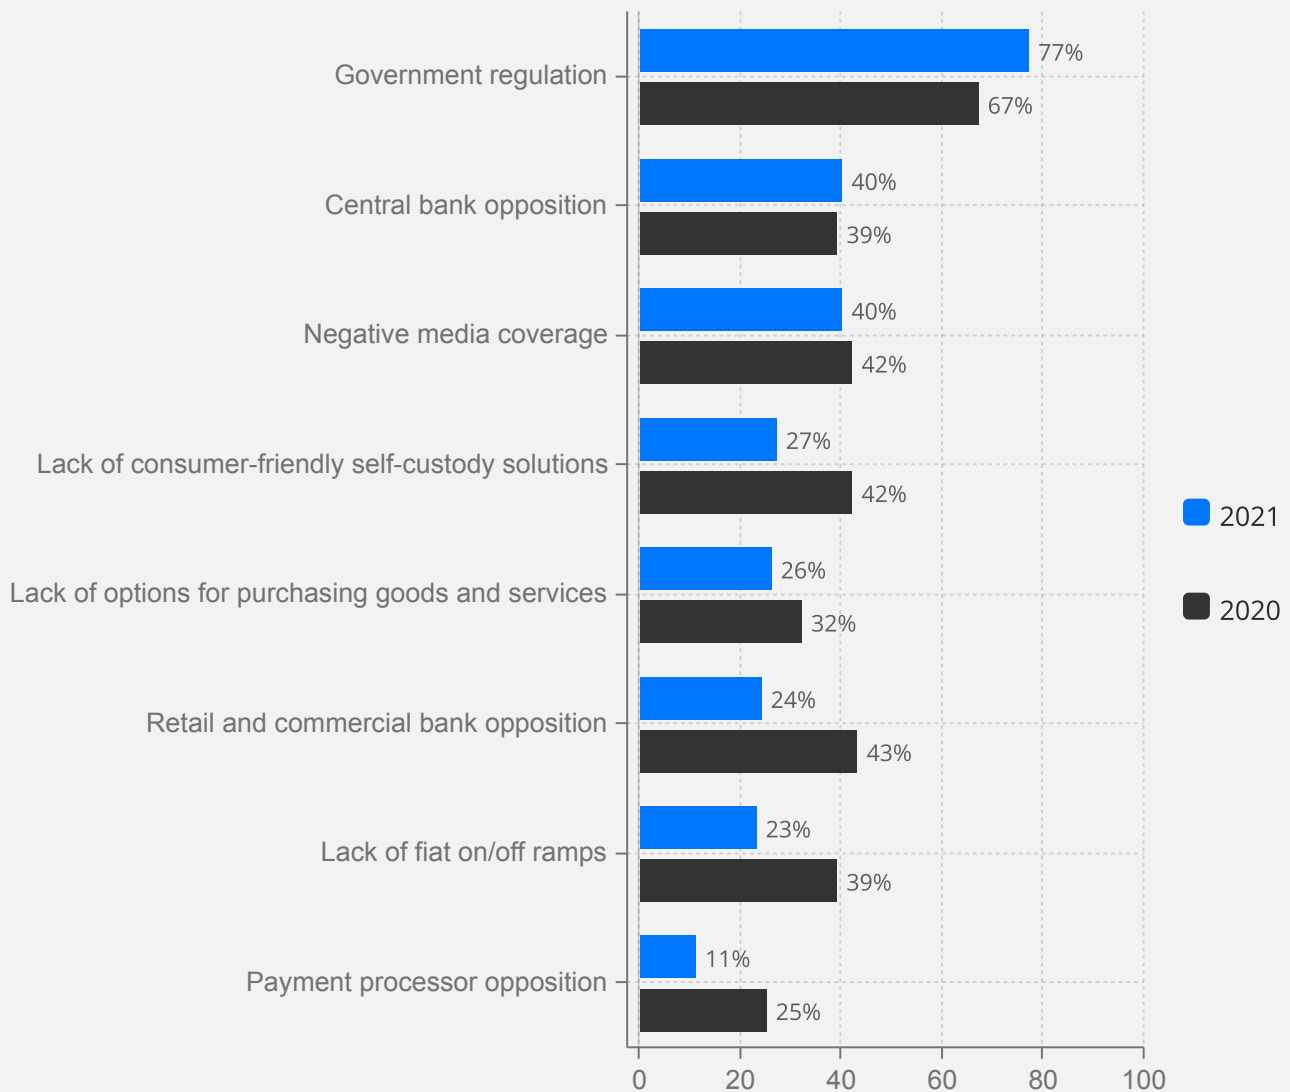

2021 vs. 2020

Crypto Fund Survey (cont.)

While crypto investors believe that institutional interest has and will continue to increase in 2021, there are several obstacles that continue to prevent the widespread adoption of cryptocurrencies.

Crypto Fund Views of Top Obstacles to Widespread Crypto Adoption
All Fund Types

Crypto funds continue to report that government regulation is the largest obstacle to widespread adoption of cryptocurrencies.

Crypto Fund Survey (cont.)

A question on the role of increased money supply and inflation expectations in shaping crypto adoption, particularly as a store of value, was added to our survey for 2021. 87% of funds believe such increases will drive adoption while only 4% disagree.

Though not shown above, there was no disagreement from funds based in Europe/Other. Funds based in Asia were somewhat more likely to disagree.
